

# PLANE PRINT

## PLANE PRINT *Snowy* EDF version

**NOTE:** Slicing **only**  
works with CURA!

You can find the STL data  
at [www.planeprint.com](http://www.planeprint.com)

# PLANEPRINT *Snowy*

## EDF version

LW-PLA

PLA

TPU

# Required accessoires – basic equipment

- **LW-PLA** (**cannot be replaced by PLA!**), ~800 grams
- **PLA** oder bether **Tough PLA**, ~80 grams
- **TPU A95**, ~20 grams

- some tapping screws Ø2 mm
- Metal screw 3\*20mm, 1 piece
- CA super glue (liquid and liquid medium)
- CA activator
- Carbon tube Ø8\*500mm, 2 pieces
- Steel wire Ø1mm or Ø1.5mm, about 500 mm
- Rod connection, 3 pieces
- Servo extension cable 350mm, 2 pieces (or a soldered servo cable extension)
- Self-adhesive Velcro tape
- Foil **0,5mm/0.020inches** Din A4 (PVC, PET-G, Polycarbonate or Lexan), 1 piece

(simply search for:  
M2 flat head tapping  
screw assortment)

## Tools

Cutter knife, small Philips screwdriver, Sandpaper, Metal saw, Needle nose pliers

## RC Components

**ENGINE** 4S EDF 50 MM – (We use the FMS), but it also works well with 3S.

**BEC-CONTROLLER** suitable for your EDF

**RECEIVER** 4 Channel

**BATTERY** 4S LiPo-Akku, 2300 - 2500 mAh  
(ideal weight 250g – A lighter battery does not make sense, because otherwise you need lead)

**SERVOS WINGS** 2 pieces like **Corona 929MG, 939MG, Hitec HS-5070MH** or equivalent

**SERVO RUDDER** 1 piece like **Corona 929MG, 939MG** or equivalent  
**The servo should definitely have metal gear!**

Maximum dimensions::

# Printing the parts – Printing profiles

This manual is constantly being improved and supplemented, we recommend downloading the **latest version** from our website **before building**.

For slicing all Planeprint models, these profiles have to be created in Cura:

PROFILE P1\_fullbody  
PROFILE P2\_hollowbody  
PROFILE P3\_surface  
PROFILE P4\_flex  
PROFILE P5\_gyroid

You can find the description at [www.planeprint.com/print](http://www.planeprint.com/print)

## Important for the 1-wall-print (P3, P5)!

In order to print airfoils of the lowest possible weight with high stability, it is necessary to print with only one wall line (Nozzle 0.4 mm). Decisive here is the adhesion between the layers! To achieve this, you must print at a much higher temperature than normal. As a **guideline**, 230° C is a good starting point. The parts-cooling fan should be set to 0% or a maximum of 20%. Since not every printer works the same, it may be necessary to make small adjustments to these settings.

For the new PROFILE P5\_gyroid it is essential to use **Cura Version 5 or later**, It will work with older versions, but the weight of the parts will be higher and the printing time longer.

### PROFILE P5\_gyroid

It is **essential for the necessary stability** of the **LW parts printed with PROFILE\_5** are as stable as possible.

Please use a test part to check the strength by fracture tests. It must not break along the layer lines under any circumstances! Also note that the printing temperature for LW-PLA is as low as possible to obtain a wall thickness of 0.4 to 0.6 mm at a flow of 65%.

**At too high temperatures, LW-PLA becomes brittle and breaks more easily.**

The development of a complex, airworthy RC flight model to express on any standard 3D printer is a very complex and extensive process. Therefore, we appeal to your fairness not to forward the STL data you have acquired to third parties.

**Thank you for your understanding and have fun with your PLANEPRINT MODEL!**

# PROFILE P1\_FULLBODY **PLA or Tough PLA**

The following parts must be sliced with the PROFILE P1\_FULLBODY.  
Please note the additional settings for the individual parts!

## Carbon tool 8mm\_p1.stl

**MATERIAL** PLA, Weight: ~ 6 g

### **ADDITIONAL SETTINGS**

None required

## EDF-Tube FMS50\_p1\_so.stl

**MATERIAL** PLA, Weight: ~ 9 g

### **ADDITIONAL SETTINGS**

None required

# PROFILE P1\_FULLBODY PLA or Tough PLA

The following parts must be sliced with the PROFILE P1\_FULLBODY.  
Please note the additional settings for the individual parts!

## Parts 1\_p1\_so.stl

**MATERIAL** PLA, Weight: ~ 8 g

### ADDITIONAL SETTINGS

None required

## Parts 2\_p1\_so.stl

**MATERIAL** PLA, Weight: ~ 6 g

### ADDITIONAL SETTINGS

None required

# PROFILE P1\_FULLBODY **PLA or Tough PLA**

The following parts must be sliced with the PROFILE P1\_FULLBODY.  
Please note the additional settings for the individual parts!

Protector FL\_p1\_so.stl  
Protector FR\_p1\_so.stl  
Protector WL\_p1\_so.stl  
Protector WL\_p1\_so.stl

**MATERIAL** PLA, Weight: ~ 4 g

## **ADDITIONAL SETTINGS**

None required

Servocovers\_p1\_so.stl

**MATERIAL** PLA, Weight: ~ 11 g

## **ADDITIONAL SETTINGS**

None required

# PROFILE P2\_HOLLOWBODY **PLA or Tough PLA**

The following parts must be sliced with the PROFILE P2\_HOLLOWBODY.  
**Please note the additional settings for the individual parts!**

## Center Part\_p2\_so.stl

**MATERIAL** PLA, Weight: ~ 7 g

### **ADDITIONAL SETTINGS**

None required

## EDF Bracket FMS50\_p2\_so.stl

**MATERIAL** PLA, Weight: ~ 1 g

### **ADDITIONAL SETTINGS**

None required

# SPIRALIZE/VASE MODE – Tough PLA or PLA

The following parts must be sliced with the Funktion **Spiralize Outer Contour** (Cura) or **Spiral Vase** (Prusa Slicer). For these parts, only the outer wall (1 line/perimeter) is printed without Z-seam, no top and bottom layers.

**It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Breastplate\_vase\_so.stl

**MATERIAL** PLA, ~ 5 g

### SETTINGS

- Wall Line Count/Perimeters: 1
- Spiralize Outer Contour (Cura)/  
Spiral Vase (Prusa)
- Top and Bottom Layers: 1

**TIP** If the walls of your print are too thin, you can increase the wall thickness (to 0.5) or increase the flow rate slightly.

Remove the yellow-marked support

# PROFILE P4\_FLEX TPU A95

The following parts must be sliced with the PROFILE P4\_FLEX.  
Please note the additional settings for the individual parts!

Tension belt TPUA95\_p4\_J.stl  
Tension belt VarioShore\_p4\_J.stl

**MATERIAL** TPU ~ A95, Weight: ~ 2 g

## ADDITIONAL SETTINGS

- Infill Density 100 %

Hinges\_p4\_so.stl

**MATERIAL** TPU A95, Weight: ~ 1 g

## ADDITIONAL SETTINGS

- Infill Density 100 %

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Aileron 1 left\_p5\_so.stl and Aileron 1 right\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 15 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

- set Brim

## Aileron 2 left\_p5\_so.stl and Aileron 2 right\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 12 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

- set Brim

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Canopy 1\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 8 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

None required

## Canopy 2\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 16 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

None required

# PROFILE P5\_GYROID Light-Weight LW-PLA!

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Fuselage 1\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 48 g\*

\*Weighed (approximate guideline)

### ADDITIONAL SETTINGS

None required

## Fuselage 2 left\_p5\_so.stl and Fuselage 2 right\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 45 g\*

\*Weighed (approximate guideline)

### ADDITIONAL SETTINGS

None required

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Fuselage 3A\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 50 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

None required

## Fuselage 3B\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 18 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

None required

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Head\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 46 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

- Infill Density **10 %**

## Tail 1\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 8 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

None required

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Tail 2\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 25 g\*

\*Weighed (approximate guideline)

### ADDITIONAL SETTINGS

None required

If you don't have a suitable transparent material for the rudder, you can print [Tail 2 Rudder\\_p5\\_so.stl](#) and replace it later with a new tail.

## Wing 1 left\_p5\_so.stl and Wing 1 right\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 38 g\*

\*Weighed (approximate guideline)

### ADDITIONAL SETTINGS

None required

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

**Wing 2 left\_p5\_so.stl and  
Wing 2 right\_p5\_so.stl**

**MATERIAL** LW-PLA, ~ 15 g\*

\*Weighed (approximate guideline)

## **ADDITIONAL SETTINGS**

None required

**Wing 3 left\_p5\_so.stl and  
Wing 3 right\_p5\_so.stl**

**MATERIAL** LW-PLA, ~ 45 g\*

\*Weighed (approximate guideline)

## **ADDITIONAL SETTINGS**

None required

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

**Wing 4 left\_p5\_so.stl and  
Wing 4 right\_p5\_so.stl**

**MATERIAL** LW-PLA, ~ 27 g\*

\*Weighed (approximate guideline)

## **ADDITIONAL SETTINGS**

None required

**Wing 5 left\_p5\_so.stl and  
Wing 5 right\_p5\_so.stl**

**MATERIAL** LW-PLA, ~ 27 g\*

\*Weighed (approximate guideline)

## **ADDITIONAL SETTINGS**

None required

# PROFILE P5\_GYROID Light-Weight LW-PLA!

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

**Wing 6 left\_p5\_so.stl and  
Wing 6 right\_p5\_so.stl**

**MATERIAL** LW-PLA, ~ 24 g\*

\*Weighed (approximate guideline)

## ADDITIONAL SETTINGS

None required

**Wing 7 left\_p5\_so.stl and  
Wing 7 right\_p5\_so.stl**

**MATERIAL** LW-PLA, ~ 24 g\*

\*Weighed (approximate guideline)

## ADDITIONAL SETTINGS

None required

# PROFILE P5\_GYROID **Light-Weight LW-PLA!**

The following parts must be sliced with the PROFILE P5\_GYROID. **Please note the additional settings for the individual parts! It is essential to print these parts with LW-PLA!**

**Basic settings for LW-PLA:** Please follow the instructions in our **WINGTEST AND CALIBRATION TOOL** on our website for correct adjustment!

## Interconnects\_p5\_so.stl

**MATERIAL** LW-PLA, ~ 3 g\*

\*Weighed (approximate guideline)

### **ADDITIONAL SETTINGS**

None required

## Basic Information:

# Gluing the parts printed with PROFILE P5

- STEP 1** As a first step, it is important to **roughen and smooth the adhesive surfaces** with sandpaper.
- STEP 2** Insert the **interconnects into the slots** provided on one side.
- STEP 3** Apply **a lot of glue** to the side with the interconnects. It is important that there is glue everywhere, especially on the outside and inside of the wall surfaces, in order to achieve a perfect connection. The interconnects only serve to align the parts to each other. It is better **not** to apply glue here, otherwise it can happen that the glue suddenly hardens while the parts are being put together and stops the process.

**Use medium viscosity CA glue, thinner glue would run down the parts too easily.**

After assembly, **align the two parts exactly** and wipe off the excess CA glue from the surface with a cloth. Now spray with activator spray along the gluing surface and carefully press the parts together.

- STEP 4** Clean the glued areas slightly with a **sharp-bladed** cutter.

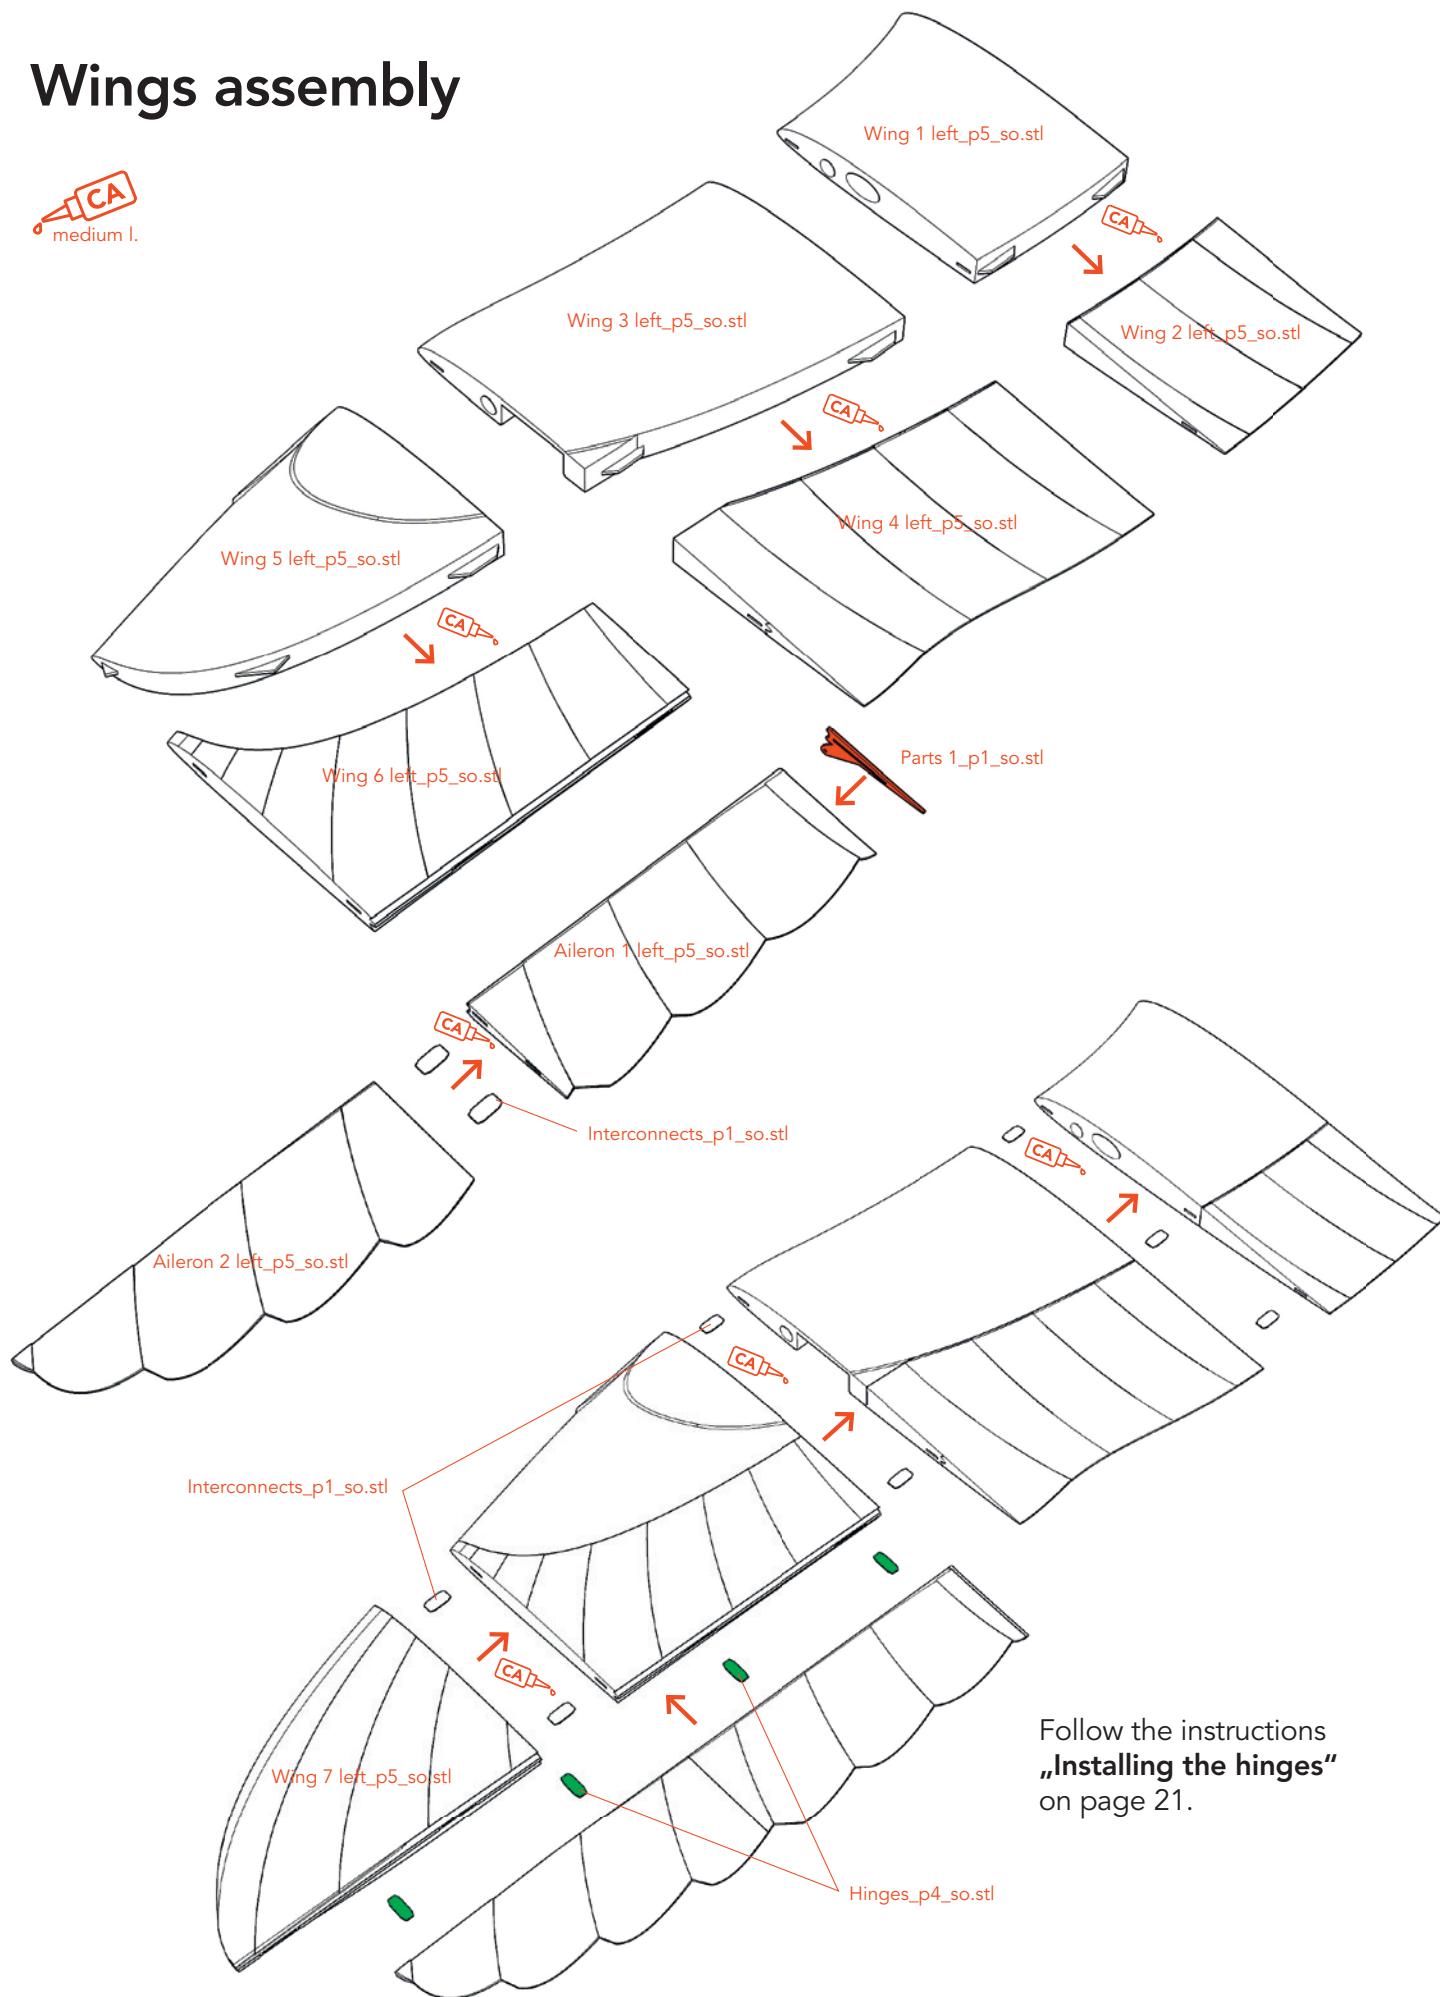

## Installing the hinges – rudder/elevator/aileron/flaps

First glue the TPU hinges into the aileron. Then put it on the wing and fold it a little to the side and give a drop of thin liquid glue on each hinge! CA glue. Push it all the way up against the wing, imprinted spacers provide the proper spacing. Wait until the glue has completely coagulated in the slots of the hinges (by capillary action). Now spray some activator spray on each hinge to cure the CA glue. Repeat the process on the other side of the hinges. **Do not use too much glue and test if each hinge holds well.**

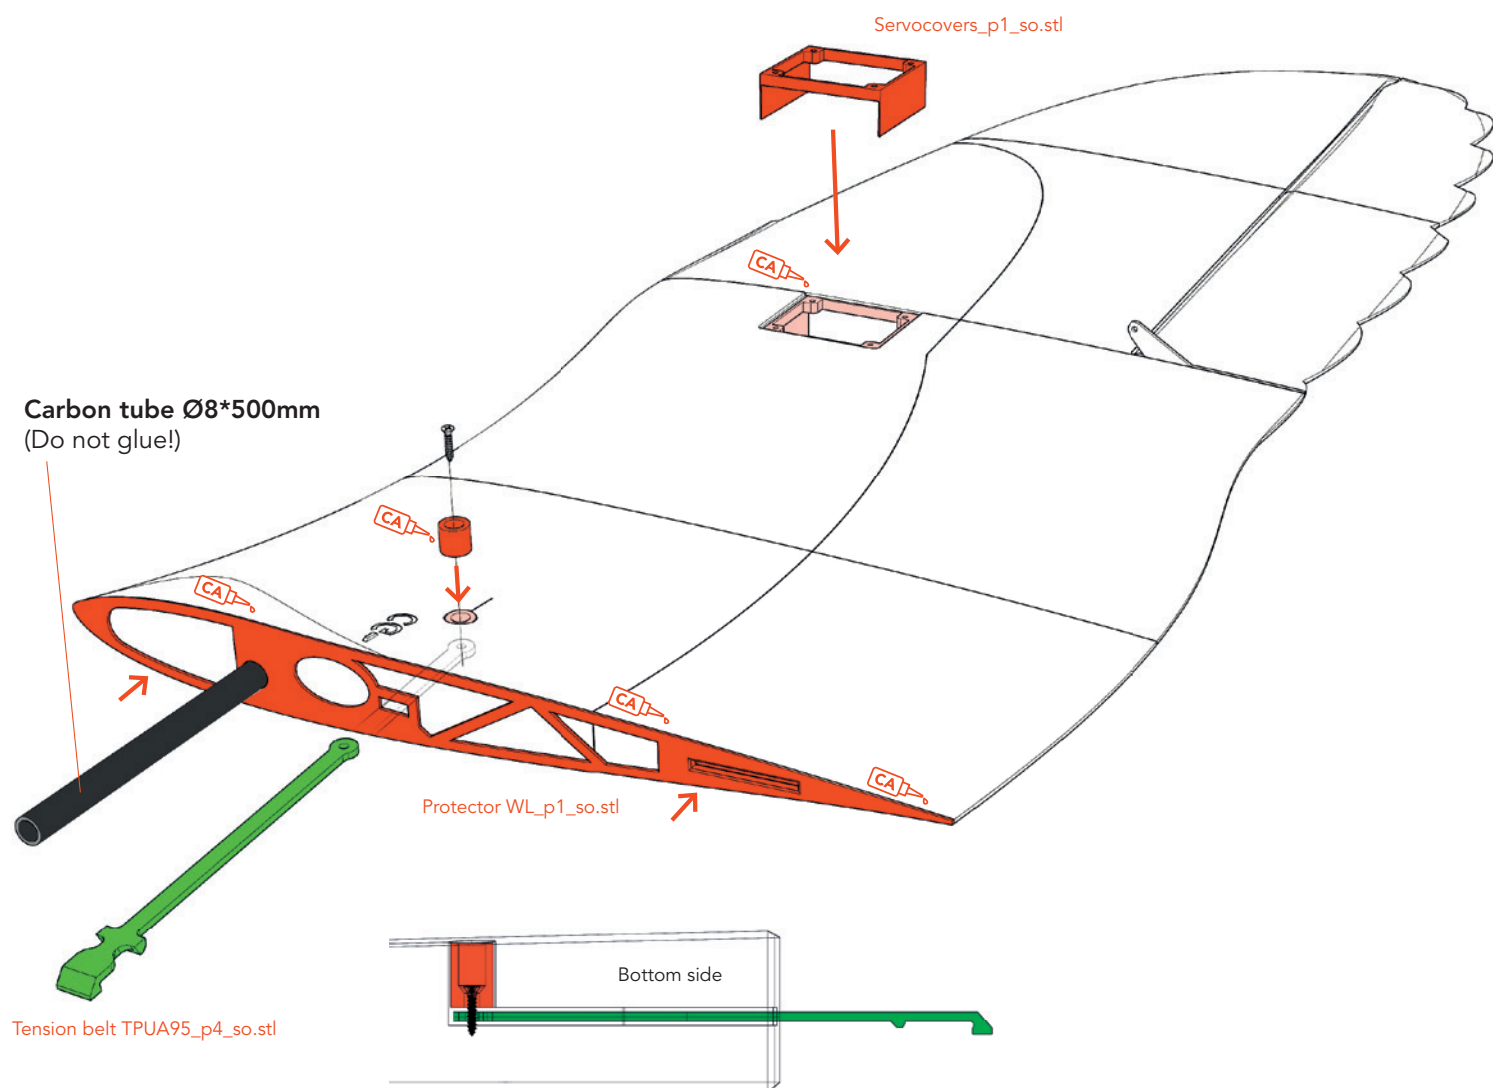

# Wings assembly

Follow the instructions  
„Installing the hinges”  
on page 21.

# Wings assembly

The sleeve for the tension belt must be aligned as shown here so that the belt can be secured with a screw.

## NOTE

FL = Fuselage left  
FR = Fuselage right  
WL = Wing left  
WR = Wing right

The inscription is the side of the adhesive surface!

# Aileron Servo

Assemble the parts as shown here.

Align the servo so that the lever protrudes exactly in the center of the slot.

Tighten the servo cover with four tapping screws.

# Fuselage assembly

medium l.

First remove support.

**Please be careful with the knife!**

You can also use a saw blade.

# Fuselage assembly

Carbon tube Ø8\*500mm  
(Do not glue!)

## Cover mount

# Tailplane assembly

Mount the tail as shown in the picture.

PET-G oder PVC foil (0,5mm)

First, please print the Din A4 sheet **Rudder template.pdf** from the download folder.

Insert the foil rudder into the slot and let thin CA glue run into the gap.

A 3 mm screw (M3) must fit through this hole and turn easily but precisely.

If you don't have a suitable transparent material for the rudder, you can print **Tail 2 Rudder\_p5\_so.stl** and replace it later with a new tail.

**IMPORTANT** The rudder is enormously important for a safe flight and must not be smaller!

Glue these shims into the fuselage and drill a 2.5 mm hole from the top. Screw a 3 mm screw (M3) through the holes. The screw will cut the thread in the PLA and **must be heavy duty!**

# Tailplane assembly

Hook the steel wire into the control horn and insert the tail into the fuselage. Then carefully turn the screw into the discs.

**Attention, if the screw does not hit the hole of the tail exactly, the upper part of the fuselage will be damaged.**

## Fuselage assembly – rudder servo

Screw the servo brackets to the servo, mount the steel wire and glue the servo as shown in the picture so that it is in line with the steel wire.

## Chest protector

Optionally, you can glue this plate made of PLA on the fuselage for protection during landings.

You can also fix it with double-sided tape, then you can change it carefully.

# EDF mounting

Insert the EDF into the EDF tube and feed the cables through the hole on the bottom. Then tape it with adhesive tape and **make sure to mount the intake ring** that comes with the EDF!

**Without this intake ring the EDF has about 40% less power!**

Also seal the cables at the outlet with adhesive tape.

Screw the EDF brackets to the tube.

Then push the assembly all the way back into the push tube and glue the brackets to the base in fuselage 2 with a drop of CA glue on each side.

Remove the screws once again and glue the brackets firmly in place. Then mount the EDF again.

# Wing mounting system

Insert the center part into the fuselage and then the two carbon tubes all the way in. **Nothing needs to be glued!** Now put the wings on the tubes. Feed the tension belts and servo cables through the openings in the fuselage and insert the two PLA plates into the slots in the fuselage and wing.

To secure the wings, pull the handles of the tension belts inward and hook them into the PLA holders. **The tension belts should normally be relaxed so that they do not overstretch.**

Do not worry, if the tension belts are not hooked in, the canopy cannot be closed. So you don't forget to secure the wings before the flight.

## Painting tip

With a flat brush and brown acrylic paint is very easy to make a very lifelike painting. Do not take too dark colors then the bird is less sensitive to high temperatures in the sun.

# RC components

Use self-adhesive Velcro tape to attach the RC components.

Set the exact CG by positioning the battery.

The air inlets in the front of the head must remain open in order to cool the controller!

Fasten all cables with tape or velcro so that they cannot be pulled into the EDF!

## Center of Gravity (CG)

The aircraft must balance **absolutely precisely** on these points.

Do not forget to check if the wings are exactly in balance in the roll axis. If one wing is heavier, correct this with a small weight on the wingtip.

# Technical specifications

**WINGSPAN** 1650 mm/65 inches

**LENGTH** 652 mm/2.6 inches

**WEIGHT** 1340 grams (Battery 4S, 2300 mAh)

## Takeoff from the hand

**NOTE** When throwing, it is important that the bird is **pulled** forward, not pushed. Therefore you should not support it behind with your index finger (see picture)!

Please be aware of wildlife  
and fly the snowy owl only  
in areas where it is allowed!

# SETTINGS FOR FLYING

The SNOWY must be **programmed like a flying wing (delta)**. This means that the ailerons also take over the elevator function. Since the SNOWY requires the simultaneous use of aileron and rudder to initiate the turn for optimum flight characteristics, we recommend that you **also mix rudder to aileron function**. This means that with the aileron, the rudder also moves a little. We recommend **50 to 70 %**. When the rudder is actuated, only the rudder should be moved.

## Setting the servo travel

With the recommended CG, the basic setting of the ailerons/elevators should be as shown here. At full throttle, the EDF pulls up minimally. If this bothers you, you can mix in the ailerons/elevators:

The mixer must be **linear**.

**Aileron/Elevator default setting in gliding:**

**Aileron/Elevator default setting AT FULL THROTTLE:**

**These specifications are basic settings!** If your SNOWY still pulls up at full throttle, check the CG or mix the Ailerons a little more down or vice versa.

Deviating from this setting, this maximum travel must be set:

**ELEVATOR** up: 17 mm, down: 17 mm

**AILERON** up: 17 mm, down: 17 mm

**RUDDER** left/right: 50 mm

## Expo setting

**ELEVATOR** 30 %

**AILERON** 30 %

**RUDDER** 0 %

(for some remote controls a minus has to be in front of the number)

# Control Direction Test

When checking the control directions, look at the aircraft from behind.

Zero setting

Elevator up

Elevator down

Aileron left

Aileron right

Rudder left

Rudder right

EDF off

Full throttle

# AGE RECOMMENDATION 14+

**NOT FOR CHILDREN UNDER 14 YEARS.  
THIS IS NOT A TOY!**

By using the download data, an RC model airplane, called „model“ for short, can be manufactured using a 3D printer. As a user of this model, only you are responsible for safe operation that does not endanger you or others, or that does not damage the model or property of others.

PLANEPRINT.com assumes no responsibility for damage to persons and property caused by pressure, transport or use of the product. Filaments, printing supplies, hardware or consumables that can not be used after faulty 3D printing will not be replaced by PLANEPRINT.com in any way.

When operating, always keep a safe distance from your model in all directions to avoid collisions and injuries.

This model is controlled by a radio signal. Radio signals can be disturbed from outside without being able to influence it. Interference can lead to a temporary loss of control.

Always operate your model on open terrains, far from cars, traffic and people.

Always follow the instructions and warnings for this product and any optional accessories (servos, receivers, motors, propellers, chargers, rechargeable batteries, etc.) carefully.

Keep all chemicals, small parts and electrical components out of the reach of children.

Avoid water contact with all components that are not specially designed and protected. Moisture damages the electronics.

Never take an item of the model or accessory in your mouth as this can lead to severe injuries or even death.

Never operate your model with low batteries in the transmitter or model.

Always keep the model in view and under control.  
Use only fully charged batteries.

Always keep the transmitter switched on when the model is switched on.

Always remove the battery before disassembling the model.

Keep moving parts clean and dry at all times.

Always allow the parts to cool before touching them.

Always remove the battery after use.

Make sure that the Failsafe is properly set before the flight.

Never operate the model with damaged wiring.

Never touch moving parts.

We develop our models to the best of our knowledge and belief.  
We accept no liability for consequential damage and injuries caused by improper use or incorrectly printed parts. **Please be careful when handling motors, batteries and propellers** and only move your model with insurance and in approved places!

# PLANE PRINT
